Ecology	Name of item: Motukorea Coastal Vegetation		Map reference: 30-56
Island: Motukorea (Browns)	**SES 40** (Site of Ecological Significance)		N 1:4,000

Description of Item

Pohutukawa forest is dotted along spectacular volcanic tuff cliffs and headlands. The threatened plant *Euphorbia glauca* grows at one site on the tuff cliffs. This species is in serious decline and this is the only natural population on the inner gulf islands. There is a small dune area with a range of species growing on it including spinifex, knobby clubrush, ngaio and pohuehue. *Euphorbia glauca* has been planted on the dunes and along the cliff base.
