

Ecology	Name of item: Nani Island	Map reference: 4-11
----------------	---------------------------	--------------------------------------

Island: Nani	SES 52 (Site of Ecological Significance)	
--------------	---------------------------------------------	--

Description of Item

This site is of international importance to a threatened species, the white-fronted tern, with more than 1% of the total population breeding here. Another threatened seabird, the red-billed gull (which is in gradual decline nationally) also breeds here. The endemic variable oystercatcher nests here.
